

# UNLOCKING THE BIOGAS POTENTIAL OF LIVESTOCK FARMING

ALFA aims to foster the adoption of renewable energy sources by enabling livestock farmers in 6 EU countries to overcome the current challenges of using their manure from livestock farming waste to create biogas.

Technical and business support services will be offered to more than 50 livestock farmers across EU.

Awareness raising campaigns, mutual learning and networking opportunities will be provided to actors across the whole biogas value chain.

Policy recommendations and replication guidelines will be issued to allow massive scalability of biomass across EU.

Open science-based information will be facilitated by the ALFA Engagement Platform and tools.
